"Megapay is ideal for a health sector agency like Sunbeam House Services, we have many different scales, allowances, etc, and Intelligo have committed a lot of time and resources to keeping up to date with our various requirements ..."

Nigel Locke
General Manager
Sunbeam House

CASE STUDY

Sunbeam House Services provides training, employment and support services for adults with intellectual disabilities. They are guided in the direction of service provisions by the needs and desires of their clients, supported through advocacy and empowerment. SHS currently employs over 320 people through 30 sites around Wicklow and Dublin. The industry they are in, requires swift response and ability to process payroll requirements accurately and instantly especially for temporary and flexi-time workers.

According to Nigel Locke, General Manager, "We chose Intelligo from the other providers in the Irish marketplace because they are the main payroll supplier to our sector. As part of the health service, we have many different rates, scales, allowances, etc. Intelligo have committed a lot of time and resources to keeping up to date with the various requirements in this sector".

"We find the customer support staff very helpful, when I have a question with a function in Megapay, they are open to suggestions for further improvements and we are very satisfied with the level of support provided," he said.

When asked what Nigel's thoughts are for the system, he said, "Megapay has always met our payroll requirements and Intelligo has kept improving the functions within the application. Recently, we introduced a Time and Attendance System and were delighted at how seamlessly Megapay was able to import the data into the payroll timesheets each month".

He added, "Megapay is a payroll system that is ideal for a health sector agency like SHS, as well as providing a facility for various rates of pay, it has a report writer function that can be used to produce any type of payroll report required at the touch of a button.
